

How to USE YOUR BLOG ITS

1. Double click the action file (.atn) – this will install it into your actions palette in Photoshop.
2. **You must open the .psd template *and* play the corresponding action.** Example: Open the template called “Blog3.psd”, then play the action named “Blog 3”.
3. When the action is finished playing, as long as your move tool is selected you can select your photo layers and move them around within the “window” to place them as you’d like.
4. Go in your Photoshop menu to **File > Save as** and save a .jpg copy to upload to your blog. If your blog has a patterned or colored background, you can turn off the background color on the blog it template (click the little “eyeball” next to the background layer) and save it as a .png. This way the background will be transparent and your blog pattern or color will show through.
